

# My first betacontrol<sup>®</sup> ECO Starterkit

## Sharpening price awareness!

Dear Sir or Madam,

**My first betacontrol<sup>®</sup> ECO Starterkit** is a low-cost, reliable and simple measuring solution that will help you create a decisive lead over the competition for your company.

We have purposely avoided cheap solutions because we think that such terms as quality, reliability and functionality actually mean something. But still, with this addition to our product portfolio, we are making it as easy as possible to implement continuous measurements for flat products.

### My first betacontrol<sup>®</sup> ECO Starterkit includes:

- betacontrol-Scanner I-VI for material widths of 950-3,500 mm
- betacontrol-Sensor with Kr 85 or Sr 90 for measuring ranges from 0-5,000 g/m<sup>2</sup>
- betacontrol-Switch Cabinet and Fan for ambient temperatures of up to 40°C
- betacontrol-Connection Cables
- betacontrol-Visualization Software for displaying single profiles, average profile, receipt parameter, roll profiles, data storage
- 12 month guarantee
- 10-year spare parts and follow-up purchase availability guarantee

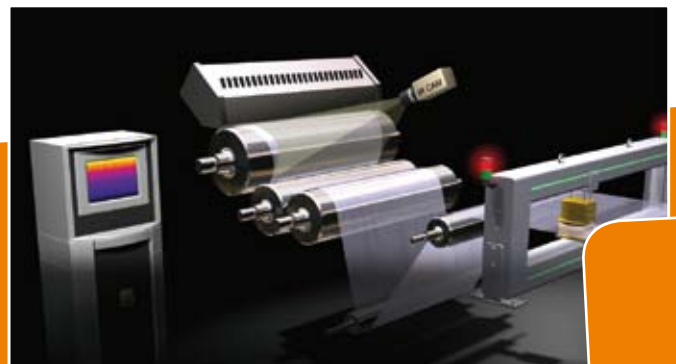

### What do you have to do?

Set the width of the product to be measured, select the traversing value, specify quantities and provide a PC with Vista or Windows XP and an Ethernet connection.

Scanner size	Width of the product to be measured
I	950 mm
II	1,460 mm
III	1,970 mm
IV	2,480 mm
V	2,990 mm
VI	3,500 mm

### What happens if you need more?

**My first betacontrol<sup>®</sup> ECO Starterkit** possesses a modular design so that it's possible to add capacities with additional features as required or even upgrade to the betacontrol Indicon S03 system. The Indicon One S-03 offers many control features and options.
